

Midas_V2 Run and Debug Guide v1.0

■ Successful run — exact sequence (what should happen)

You run: `python scripts/run_day_simple.py --date 2025-08-07 --scenario E`

0) Parse & setup → creates (if missing) `out\20250807\E`.

1) Build universe → runs `topgappers.py`, writes `data\samples\universe_sample.txt`.

2) Fetch minute bars → runs `fetch_minutes_polygon.py`, writes `data\samples\sample_2025-08-07.csv`.

3) Backtest → runs `midas_v2.cli backtest`, writes `out\20250807\E\results_2025-08-07.csv`.

4) Auto-summarize → runs `summarize_results.py`, saves `out\20250807\E\summary_2025-08-07.txt`.

Finish → prints [OK] Backtest done.

Quick verification commands:

```
dir .\out\20250807\E\
```

```
Get-Content .\out\20250807\E\summary_2025-08-07.txt -Head 20
```

```
(Get-Content .\out\20250807\E\results_2025-08-07.csv | Measure-Object -Line).Lines
```

■■ Errors & debugging — sequence + fixes

1) Universe build problems

Symptom: No [UNIVERSE] ... has N symbols, or N=0, or command fails.

Check: `Test-Path .\scripts\topgappers.py`

```
Get-Content .\data\samples\universe_sample.txt -Head 20
```

Fix: confirm script exists, or cap to Top-12 tickers:

```
(Get-Content .\data\samples\universe_sample.txt | Select-Object -First 12) | Set-Content .\data\samples\universe_sample.txt
```

2) Minute fetch problems (Polygon)

Symptom: No `sample__.csv` files, many failed, or HTTP/401.

Check: `dir .\data\samples\sample_2025-08-07_*.csv`

Fix: ensure Polygon API key loaded, rerun fetch step:

```
$D='2025-08-07'; python scripts/fetch_minutes_polygon.py --date $D --session rth
```

3) Backtest problems

Symptom: No results CSV, or header-only (1 line), or params look wrong.

Checks:

```
$csv='.\out\20250807\E\results_2025-08-07.csv'; (Get-Content $csv | Measure-Object -Line).Lines
```

```
Get-Content $csv -Head 10
```

```
Import-Csv $csv | Group-Object outcome | Select Name,Count | Format-Table -Auto
```

Interpretation:

- 1 line only = no valid trades (normal with strict guards).
- Many losers = noisy universe → trim Top-12 or raise min_pm_vol.

Bypass runner to see WHY params:

```
python -m midas_v2.cli backtest --date 2025-08-07 --scenario B --universe
data\samples\universe_sample.txt --out out\20250807\B
```

Confirm Scenario B config didn't drift:

```
Select-String -Path .\config\scenarios.toml -Pattern '[scenario\B\]\^vwap_confirm\^ema_confirm\^
macd_confirm\^gate_minutes\^tp_pct\^sl_pct\^min_pm_vol\^dip_reclaim\^reclaim' -Context 0,1
```

Low-friction improvements:

```
(Get-Content .\data\samples\universe_sample.txt | Select-Object -First 12) | Set-Content
.\data\samples\universe_sample.txt
```

```
$path='.config\scenarios.toml'; $lines=Get-Content $path -Raw -Encoding UTF8;
$pattern='([scenario\B\][s\S]*min_pm_vol\s*=\s*)\d+'; $new=$lines -replace $pattern,'{1}75000';
[IO.File]::WriteAllText($path,$new,[Text.UTF8Encoding]::new($false))
```

4) Summary save problems

Symptom: CSV exists but no summary_.txt or warning.

Check: Test-Path .\scripts\summarize_results.py

```
python scripts/summarize_results.py --date 2025-08-07
```

Fix (manual save if needed):

```
$D='2025-08-07'; $S='E'; $D8=$D -replace '-',";"; $out="out\$D8\$S"; if(!(Test-Path $out)){ New-Item
-ItemType Directory -Path $out | Out-Null }; python scripts/summarize_results.py --date $D |
Out-File -Encoding UTF8 "$out\summary_$D.txt"
```

Minimal sanity control (Scenario B, 2025-08-05, STTK only)

```
@('STTK') | Set-Content -Encoding ASCII .\data\samples\universe_sample.txt; python -m
midas_v2.cli backtest --date 2025-08-05 --scenario B --universe data\samples\universe_sample.txt
--out out\20250805\B; python scripts/summarize_results.py --date 2025-08-05
Expect B: TP=1 SL=0 in the summary (and runner auto-saves summary when you use it).
```
