

Midas_V2 Roadmap: Tactical & Strategic

Tactical Roadmap (Next 1–2 Versions)

- Current version: **v0.3.21** (about to push).
 - Tested Scenario B on 2025-08-05 → no trades taken.
 - Scenario D strict earlier: ~63% WR, +167.57 PnL.
 - Scenario E dip-reclaim: ~52% WR, +145.03 PnL.
 - Catalyst logic in place but still rough (A-grade ≥2 best).
 - **Immediate steps:**
1. Push v0.3.21 to GitHub.
 2. Run Scenario B for Aug 5–31 baseline.
 3. Add rising green candle detection.
 4. Enforce MACD histogram rise_bars=2–3.
 5. Test with Opening RVOL gate (≥1.5×).
 6. Prepare v0.3.22 with these upgrades.

Strategic Roadmap (Future 1–3 Months)

1. Adaptive Risk-Perceived Sizing

- Bet more when odds are better:
 - A-grade catalysts, strong MACD/EMA/VWAP alignment, clean Top-N.
- Guardrails:
 - Per-trade cap (e.g., 2% of equity).
 - Daily loss cap (\$1k).
 - Drawdown throttles.
- Goal: scale to ~\$500/day profit with controlled risk.

2. Multi-Strategy Integration

- Build a **Scenario Router** that merges A–E:
 - Prioritize strongest setups (D strict > E dip).
 - Allow one trade per ticker per strategy, but risk-split across.
- Later: multiple trades per ticker when setups repeat (scalp + reclaim).

3. Precision & Timeframes

- Progression:
 - Start: 1-minute entries.
 - Upgrade: 1-second candles for tighter fills & better WR.
 - Allow mixing 1m charts (trend confirm) with 1s charts (entry).

4. Catalyst & Universe Hygiene

- Always prefer A-grade (score ≥2).
- B-grade only to fill Top-N if list is too small.
- Exclude weak/unreliable tickers (e.g., Chinese ADRs).
- Keep raw top-gappers separate from catalyst universes for testing.

5. Profitability Milestone Targets

- Win Rate goal: ≥60%.
- Average TP/SL: 2.0 / 2.5%.
- Trade count: 4–5 per day.

- Daily profit: ~\$500 baseline.
- Monthly stretch target: \$50k with adaptive sizing & router.

Summary

- **Short-term**: push v0.3.21, baseline Scenario B, add rising green bars + histogram checks, then move to v0.3.21.
- **Long-term**: adaptive risk sizing, scenario router, 1 second entries, catalyst hygiene, and multi-trade per ticker.
- This two-layer roadmap ensures we don't lose sight of the **future vision** while keeping tomorrow's work clear.
