

v0.3.21 Plan — Gold Standard Filters

Scope

- **Catalyst quality filter:** require A or better (`--min-grade 2``), no B-fill by default.
- **Magnitude-aware scoring:** keep %→score mapping (A/A+/super-A).
- **Negative headlines:** already excluded (drop-neg).
- **Denylist hygiene:** drop warrants (`*.WS``, `-WT``, etc.) and optional China ADRs.
- **Gap & price band:** keep Cameron bands (`price 1–20``, `gap 10–40%``).

Tape Confirmation (essential for WR)

- **Opening RVOL gate (default 1.5):** require first 10–15m volume $\geq 1.5\times$ prior day same window.
- **Rising green candles (MANDATORY):** require 3 consecutive green 1m bars after the gate.
- **Optional:** `--rise-with-volume`` → green candles must also show rising volume.
- **EMA + VWAP confirm:** require reclaim and slope $\geq$ threshold.
- **MACD confirm:** line > signal and histogram rising (last 2 bars).

Entry & Risk

- **One trade per symbol** (for now).
- **Hard risk:** per-trade SL (2.5%) and daily max-loss cap.
- **Time windows:** entries allowed in morning session + power hour, optional mid-day off.
- **Spread/liquidity guard:** skip if bid-ask spread too wide or last-1m volume below floor.

Sizing Framework

- **Score-based sizing (log only in v0.3.21):**
 - A = $1.0\times$ risk
 - A+ = $1.5\times$ risk
 - Super-A = $2.0\times$ risk
- All capped by per-trade and daily limits.

Reproducibility & UX

- **Summarizer footer:** print min_grade, topn, rvol gate, rise-bars, rise-with-volume.
- **One-pager summaries** remain the single source of truth.
- **SAFE runner echo:** print selected filters at run start.

Implementation Checklist

run_day_catalyst_SAFE.py

- Add `--min-rvol-open`` and `--rise-bars`` flags.
- Filter universe based on RVOL gate + rising green candles.
- Default: `--min-grade 2``, `--topn 3``, `--min-rvol-open 1.5``, `--rise-bars 3``.
- Optional `--rise-with-volume`` flag.
- Attach/log `risk_mult`` per pick.

topgappers.py

- Add denylist regex for `*.WS``, `-WT``, `^W``.

midas_v2.cli (backtester)

- Accept optional `risk_mult`` and log it in results (non-breaking).

summarize_results.py

- Add footer line: `min_grade=2, topn=3, min_rvol_open=1.5, riseBars=3, rise_with_volume=False``.

Run Pattern (v0.3.21)

Baseline

```bash

python scripts/run\_day\_simple\_SAFE.py --date YYYY-MM-DD --scenario B

```

Catalyst (A-only, RVOL gate, rising greens)

```bash

python scripts/run\_day\_catalyst\_SAFE.py --date YYYY-MM-DD --scenario B --topn 3 --min-grade 2 --min-rvol-open 1.5 --rise-bars 3

```

Defaults to Start

- `--min-grade 2`` (A-only)
- `--topn 3``
- `--min-rvol-open 1.5``
- `--rise-bars 3``

- `--rise-with-volume False`
