

Midas_V2 – Session Log (2025-09-16, Final D→B→E Order)

■ Ordered Sequence of What We Did

1. **Ran Scenario D (Strict, 2025-08-05)**

Command:

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario D
```

Follow-up:

```
python scripts/summarize_results.py --date 2025-08-05
```

Output:

D: TP=0 SL=0 Win%=0

→ **no trades**.

2. **Ran Scenario B (Baseline, 2025-08-05)**

Command:

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario B
```

Follow-up:

```
python scripts/summarize_results.py --date 2025-08-05
```

Output:

B: TP=0 SL=0 Win%=0

→ **no trades**.

3. **Checked Scenario E (Dip-Reclaim, 2025-08-05)**

Command:

```
Get-Content .\out\20250805\E\summary_only_2025-08-05.txt
```

Output:

E: TP=0 SL=0 Win%=0

→ ****no trades****.

4. ****Concern raised: no trades****

- All three scenarios (D, B, E) produced 0 trades on 2025-08-05.
- We noted that strict filters often yield zero-trade days.

5. ****Catalyst run on Scenario B****

Command:

```
python scripts/run_day_catalyst.py --date 2025-08-05 --scenario B --universe
data\universe_active.txt
```

Console output included:

```
[CATALYST-DAY] date=2025-08-05 scenario=B universe=universe_active.txt
```

```
[CMD] C:\Users\boydp\AppData\Local\Programs\Python\Python313\python.exe -m midas_v2.cli
back...
```

6. ****Discussion about candle freshness****

- You said: "I never know if I am using up-to-date candles."
- We agreed stale/invalid candles could cause misleading results.
- Solution proposed: ****safe-runner**** with automated guards.

7. ****Discussion about slowness****

- You mentioned frequent "Wait" prompts in the chat window.
- Clarified that session state is preserved if you switch windows.

8. ****Expanded catalyst plan****

- ``enrich_universe_catalyst.py`` → produces ``catalyst_scores_.csv``.
- Top-N catalyst selection:
- A-grade (score ≥ 2) first.
- B-grade (score =1) fill if fewer than N.
- Expected outputs:
- ``data/universe_catalyst_.txt``
- ``out/YYYYMMDD/catalyst/catalyst_universe_.csv``

9. ****Deny list handling****

- Explored manual, auto, and hybrid deny strategies.
- Decision: ****defer deny list for later****.

10. ****Next version planning****

- Scripts defined (not included in v0.3.18):
- ``scripts/lib/data_guard.py`` (validate candles/universe).

- `scripts/run\_day\_safe.py` (daily safe runner).
- `scripts/run\_range\_safe.py` (multi-day runner).
- We agreed: **v0.3.18 = docs only**.

■ Problems Observed

- Scenarios D, B, and E all produced **0 trades** on 2025-08-05.
- Candle freshness uncertain → need automated validation.
- Deny list postponed to avoid complexity.

■ Commands Actually Run This Session

1. Scenario D (no trades):

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario D
```

2. Scenario B (no trades):

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario B
```

3. Scenario E summary check (no trades):

```
Get-Content .\out\20250805\E\summary_only_2025-08-05.txt
```

4. Catalyst run on B:

```
python scripts/run_day_catalyst.py --date 2025-08-05 --scenario B --universe data\universe_active.txt
```

■ Version Control Action

Checkpoint before adding safe-runner scripts:

```
git add -A && git commit -m "Docs: v0.3.18 session log (D/B/E no trades, catalyst steps, deny deferred)"
git tag -a v0.3.18 -m "v0.3.18: docs only, D/B/E no trades, catalyst-first workflow, no new scripts"
git push && git push --tags
```

...

■ This document is the final record for **v0.3.18** (D→B→E order + actual commands).
