

```

# v0.3.21 Plan
## Scope
- Catalyst quality filter: require A or better (--min-grade 2), no B-fill by default.
- Opening RVOL gate: add --min-rvol-open (default 1.5), comparing first 10–15m volume vs prior day same window.
- Score-based sizing (framework):
  - A → 1.0× risk
  - A+ → 1.5× risk
  - Super-A → 2.0× risk
  - Still capped by per-trade and daily risk limits.
- Denylist hygiene: drop warrants and non-targets (patterns like *.WS).
- Docs & summary upgrades: summarizer adds footer with run parameters (min_grade, topn, rvol gate).
## Implementation Checklist
### run_day_catalyst_SAFE.py
- Add --min-rvol-open flag.
- Filter symbols failing the gate.
- Default --min-grade 2, no B-fill.
- Pass risk multiplier based on catalyst score.
### Backtester (midas_v2.cli)
- Accept risk multiplier (non-breaking).
- Log applied sizing in results CSV (risk_mult, shares).
### topgappers.py
- Apply denylist regex (drop *.WS, etc.).
### summarize_results.py
- Add footer showing run filters used.
## Run Pattern (v0.3.21)
Baseline:
```bash
python scripts/run_day_simple_SAFE.py --date YYYY-MM-DD --scenario B
```

Catalyst (A+ only, RVOL gate):
```bash
python scripts/run_day_catalyst_SAFE.py --date YYYY-MM-DD --scenario B --topn 3 --min-grade 2
--min-rvol-open 1.5
```

```
