# Midas_V2 – v0.3.22-risebars-baseline (Ready to tag)

## What we finalized today
- **Stability first**
  - Restored **stable** `src\midas_v2\strategy.py` from **v0.3.21**.
  - Turned **off** any experimental toggle (`MIDAS_USE_EXPERIMENTAL` is unset).
  - Ignored/removed the experimental file to avoid confusion.

- **Scenarios configured**
  - Set **`rise_bars = 3`** for **B, D, E**.
    - **Note:** `rise_bars` means **rising price candles** (each close > prior close), not MACD.
  - Left **`macd_rise_bars`** as a placeholder (stable strategy doesn't enforce histogram rise).
    - We **plan to implement histogram bars** soon. We attempted to add it today, but could not get the

- **Catalyst + keys**
  - Parked complex catalyst gating; SAFE runs are fine. No key changes needed for backtests.

- **Results (Aug-05 single day)**
  - **B (baseline):** 11 TP / 9 SL → **55.00%** WR
  - **D (strict):** 10 TP / 10 SL → **50.00%** WR
  - **B (catalyst, earlier compare):** 2 TP / 1 SL → **66.67%** WR

---

## Full command log (today)

### Toggle / restore / cleanup
```powershell
Ensure experimental toggle is OFF
Remove-Item Env:\MIDAS_USE_EXPERIMENTAL -ErrorAction SilentlyContinue

Restore stable strategy
git restore --source v0.3.21 -- src\midas_v2\strategy.py

(Optional) Remove experimental file to avoid confusion
if (Test-Path src\midas_v2\strategy_experimental.py) { Remove-Item src\midas_v2\strategy_experimental.py }

Scenario JSON updates
```powershell
# Set rise_bars for B, D, E (rising price candles)
python -c "import json; p='config/scenarios.json'; d=json.load(open(p,encoding='utf-8')); d['B']['params']['rise_bars']=3; d['D']['params']['rise_bars']=3; d['E']['params']['rise_bars']=3; json.dump(d,open('config/scenarios.json','w'),encoding='utf-8')"

# (Optional clarity) Disable histogram flag in summaries for B/D/E
python -c "import json; p='config/scenarios.json'; d=json.load(open(p,encoding='utf-8')); [d[s]['params']['histogram']=False for s in ['B','D','E']]; json.dump(d,open('config/scenarios.json','w'),encoding='utf-8')"

# Sanity print
python -c "import json; d=json.load(open('config/scenarios.json',encoding='utf-8')); print({k:d[k]['params'] for k in ['B','D','E']})"

### Day runs (Aug-05)
```powershell
Baseline B, no RVOL flags (stable path)
python scripts\run_day_simple_SAFE.py --date 2025-08-05 --scenario B
python scripts\summarize_results.py --date 2025-08-05

Strict D for same day (compare)
python scripts\run_day_simple_SAFE.py --date 2025-08-05 --scenario D
python scripts\summarize_results.py --date 2025-08-05

```

...

### (Earlier catalyst compare you ran today—recorded for completeness)

```powershell

Enrich + SAFE catalyst (B), then summarize

python scripts\enrich_universe_catalyst.py --date 2025-08-05 --limit 50 --allow-b-fill

python scripts\run_day_catalyst_SAFE.py --date 2025-08-05 --scenario B --min-grade 2 --allow-b-fill

python scripts\summarize_results.py --date 2025-08-05

```

\*(You also ran several direct `m midas\_v2.cli backtest` calls with/without `--min-rvol-open`. Post-res

---

## Version + Git (single lines; no `&&`)

```powershell

git add -A

```

```powershell

git commit -m "Scenarios: enable rising-candle gate (riseBars) for B/D/E; revert to stable strategy; r

```

```powershell

git tag -a v0.3.22-risebars-baseline -m "v0.3.22: rising-candle gate on stable strategy; B/D/E configur

```

```powershell

git push

```

```powershell

git push --tags

```

---

## What “bars” means (clear terminology)

- \*\*`riseBars`\*\* = \*\*rising price candles\*\* (close-to-close increasing; often  $\geq 2-3$ ).

- \*\*MACD histogram bars\*\* (separate) = *indicator* values rising; will be enforced later via `macd\_rise

---

## Next steps (after you tag)

1) Run August ranges on the stable setup:

```powershell

python scripts\run_range_and_summarize.py --start 2025-08-05 --end 2025-08-31 --scenario B

python scripts\run_range_and_summarize.py --start 2025-08-05 --end 2025-08-31 --scenario D

```

2) We’ll review B vs D outcomes.

3) Then, if you want, we’ll re-introduce \*\*MACD histogram rising\*\* (and a clean opening-strength check)
