

# Video Analysis: Does this video help us? (MACD & Cameron-style context)

Short answer: it's a decent refresher on basic MACD usage, but it doesn't give the Cameron-style MACD histogram •rising-bars• rule we care about.

## What it covers

- MACD being positive or crossing up (line > signal) as a bullish condition.
- This aligns with keeping ``macd_confirm: true`` in our configs.

## What it doesn't cover

- The MACD histogram rising-bars requirement (e.g., 2-3 consecutive rising histogram bars) before entry
- Our small-cap gap-and-go specifics (very large gappers, opening RVOL gate, 1■second entries, etc.).

## How to use it today with your stable setup

- Keep ``macd_confirm: true`` (MACD line above signal).
- Keep the rising-candles confirm via ``riseBars`` (we set 3) – this is price candles, not MACD.
- Leave ``macd_riseBars: 0`` for now, since the restored stable strategy doesn't enforce histogram.

## If you want content closer to our style

- Look for material that emphasizes MACD histogram \*rising bars\* in a momentum stack for intraday small

## Bottom line

- The video supports "MACD must be bullish," which we already enforce.
- For the next WR gains, stick with the rising■candles gate we've enabled and run B/D August ranges.
- We'll add the histogram■bars check later as a single, tested drop■in so we don't risk code churn.
