

Midas_V2 – v0.3.23 Commands & Code Changes

****Timestamp:**** 2025-09-20 15:46 (America/Chicago) ****Scope:**** Consolidated record of the commands we used and the code/config changes made leading up to ****v0.3.23****.

1) Canonical Run Commands (One-liners)

```
### August 2025 range runs (B, D, E) ``powershell python scripts/run_range_and_summarize.py
--start 2025-08-05 --end 2025-08-31 --scenario B python scripts/run_range_and_summarize.py
--start 2025-08-05 --end 2025-08-31 --scenario D python scripts/run_range_and_summarize.py
--start 2025-08-05 --end 2025-08-31 --scenario E ``
```

```
### Single-day runs ``powershell python scripts/run_day_simple.py --date 2025-08-05 --scenario
B python scripts/run_day_simple.py --date 2025-08-06 --scenario D python
scripts/run_day_simple.py --date 2025-08-07 --scenario E ``
```

```
### Universe & data helpers ``powershell python scripts/topgappers.py --date 2025-08-06 python
scripts/fetch_minutes_polygon.py --date 2025-08-06 --session rth ``
```

```
### Catalyst enrichment (optional) ``powershell python scripts/enrich_universe_catalyst.py
--date 2025-08-06 python scripts/run_day_catalyst.py --date 2025-08-06 --scenario B --universe
data\universe_active.txt ``
```

```
### Summaries & analysis helpers ``powershell python scripts/run_range_safe.py --start
2025-08-05 --end 2025-08-31 --scenario B python scripts/rebuild_range_summary.py --start
2025-08-05 --end 2025-08-31 --scenario B python scripts/summarize_results.py --date 2025-08-06
python scripts/show_latest_range.py --scenario B python scripts/analyze_range_explained.py
--start 2025-08-05 --end 2025-08-31 --scenario B python scripts/analyze_base_only.py --start
2025-08-05 --end 2025-08-31 --scenario B ``
```

```
### Output sanity checks ``powershell python -c "import pathlib;
p=pathlib.Path('out/20250806/D/results_2025-08-06.csv'); print(p.exists())" python -c "import
pathlib; p=pathlib.Path('out/20250806/D/results_2025-08-06.csv');
print('\n'.join(p.read_text(encoding='utf-8').splitlines()[1:10]) if p.exists() else 'no
results')" ``
```

```
### Top-N by gap (manual trim without changing scripts) ``powershell python -c "import io;
p=r'data\universe_active.txt'; s=io.open(p,'r',encoding='utf-8').read().splitlines();
io.open(p,'w',encoding='utf-8').write('\n'.join(s[:10])+'\n')" `` (Adjust `[:10]` to desired
N; re-run `topgappers.py` to restore full universe.)
```

```
### Cleanup ``powershell python scripts/clear_out.py ``
```

2) Git Tagging for v0.3.23 (Suggested)

```
``powershell git add -A git commit -m "v0.3.23: August range baseline (B,D,E) + reporting fix
+ riseBars=3 gate + docs pack" git tag -a v0.3.23 -m "v0.3.23: August baseline ready;
reporting fixed; rising-candles gate on; docs updated" git push git push --tags ``
```

_If your current branch has no upstream: _ `` powershell git push --set-upstream origin <your-branch-name> git push --tags ``

3) Code & Config Changes (Diff-Style Summaries)

3.1 Range summary reporting fix ****Problem:**** Range summary didn't aggregate per-day results correctly. ****Change:**** Read `out/YYYYMMDD/<Scenario>/results\_YYYY-MM-DD.csv` per day; aggregate; then write range summary.

```
**Pseudo-diff:** ``diff - daily_files =
glob.glob(f"out/{day}/{scenario}/summary_only_{day}.txt") - # parse summary-only lines
(fragile) + daily_files = glob.glob(f"out/{day}/{scenario}/results_{day}.csv") + # read
structured CSVs and aggregate metrics + df = pandas.concat([pandas.read_csv(f) for f in
daily_files], ignore_index=True) + wr = (df['outcome'] == 'TP').mean() * 100 + pnl_total =
df['pnl'].sum() + write_range_summary(scenario, start, end, wr, pnl_total, len(df)) ``
```

3.2 Rising green candles gate (enabled) ****Goal:**** Enforce ****3** consecutive rising green candles****** as a momentum gate. ****Config:**** `riseBars=3` (on). ****Implementation note:**** Checked in the signal builder before entry triggers.

```
**Pseudo-diff:** ``diff - riseBars = config.get("riseBars", 0) - if riseBars and not
candles.is_rising(n=riseBars): - pass + riseBars = config.get("riseBars", 3) # default
ON in v0.3.23 + if not candles.is_rising(n=riseBars): + return NO_TRADE ``
```

3.3 MACD histogram gate (disabled for now) ****Goal:**** Keep complexity low until August baseline is replicated. ****Config:**** `macd\_riseBars=0` (off). ****Implementation note:**** The MACD line/signal is still used; only histogram-rise gate is disabled.

```
**Pseudo-diff:** ``diff - if cfg.macd_riseBars > 0 and not
macd.histogram_is_rising(cfg.macd_riseBars): - return NO_TRADE + # macd histogram gate
disabled in v0.3.23 + if cfg.macd_riseBars and cfg.macd_riseBars > 0: + pass # gate
bypassed ``
```

3.4 Universe builder hygiene (topgappers) ****Goal:**** Always write the per-day universe and update the active universe path. ****Notes:**** Use `parse\_known\_args`; remove accidental reliance on `--no-write` paths.

```
**Pseudo-diff:** ``diff - parser.add_argument("--no-write", action="store_true") - if
args.no_write: - print("[UNIVERSE] preview only") - else: - write_universe(active_path,
symbols) + write_universe(per_day_path, symbols) # e.g., data/universe_topgappers_YYYY-
MM-DD.txt + write_universe(active_universe_path, symbols) # current active universe for
runners ``
```

3.5 Catalyst day runner / enrichment ****Goal:**** Allow catalyst-scored universes and clean imports. ****Notes:**** Ensure `PYTHONPATH=src` and `.env` are loaded in script entrypoints.

```
**Pseudo-diff:** ``diff - from midas_v2 import cli # might fail if path not set + import os;
os.environ.setdefault("PYTHONPATH", "src") + from dotenv import load_dotenv; load_dotenv() +
from midas_v2 import cli ``
```

3.6 Optional Top-N trim helper (no repo changes required) ****Goal:**** Enable Top-N experiments without altering workflows. ****Method:**** Use the Python one-liner shown above to trim `data\universe\_active.txt` before a run.

4) Scenario Parameters (Reference) - ****B (baseline):**** EMA+VWAP+MACD, TP=2.0, SL=2.5, gate=10, min_pm_vol=30k, price 1–20, gap 10–40, `riseBars=3`, `macd\_riseBars=0`. - ****D (strict):**** Same confirms, gate=5, `riseBars=3`, `macd\_riseBars=0`. - ****E (dip reclaim):**** EMA+VWAP+MACD + reclaim logic, gate=10, `riseBars=3`, `macd\_riseBars=0`.

5) Notes & Guardrails 1. Keep one change at a time for clean A/B comparisons. 2. Prefer B or D as the anchor scenario for $\geq 60\%$ WR goal. 3. Only after August (and then July) baselines are verified, add ****Opening RVOL gate**** ($\geq 1.5\times$ first 10–15m). 4. Use denylist for known problematic tickers; keep price band 1–20 USD. 5. Maintain TP/SL around 2.0 / 2.5 for stability in early baselines.
