

Midas_V2 — v0.3.8-2025-09-07-envfix (Release Notes)

Date: 2025-09-07

Scope: Stable fixes for ``.env`` loading and ``PYTHONPATH`` for reliable runner behavior.

Summary

This version locks in the environment/bootstrap improvements on the 0.3.6 line and confirms prior trading-day gap logic. It keeps runtime behavior the same while removing shell-setup friction.

Changes

- ``.env`` auto-load (project root):** Runners call ``python-dotenv`` to load ``ROOT/.env`` at startup.
- `Import path fix:`** ``src/`` is injected into ``sys.path`` and propagated via ``PYTHONPATH`` to child processes (so ``python -m midas_v2.cli ...`` works).
- `Files updated:`**
 - ``scripts/run_day_simple.py`` — bootstrap + child env propagation; summary auto-save.
 - ``scripts/topgappers.py`` — bootstrap; keeps ``prev_trading_day_polygon.py`` for prior trading day.
 - ``scripts/fetch_minutes_polygon.py`` — bootstrap; logic unchanged.

> Range runners (``run_range_and_summarize.py``, ``run_range_safe.py``) remain unmodified; they can receive the same bootstrap later without behavior changes.

Verification

Single-day checks

- `2025-08-05 D`** — CSV and summary written under ``out\20250805\D\``.
- `2025-09-02 D/E`** — D: 3 trades, 0 TP, TotalPnL -30.79; E: 10 trades, 4 TP, TotalPnL -24.18.

August regression (Scenario D, 2025-08-05 → 2025-08-31)

- `Total trades:`** 79
- `Wins / Losses:`** 50 / 29
- `Win rate:`** `63.29%`**
- `Total PnL:`** `+167.57`**
- Best Day: 2025-08-06 (+174.33, 38 trades, WR 65.79%)
- Worst Day: 2025-08-05 (-19.39, 3 trades, WR 0.00%)

How to reproduce (pure Python)

Single day

```bat`

`python scripts\run_day_simple.py --date 2025-08-05 --scenario D`

`python scripts\summarize_results.py --date 2025-08-05`

```
python scripts\view_results.py --date 2025-08-05
```

```
```
```

```
### August range (Scenario D)
```

```
```bat
```

```
python scripts\run_range_and_summarize.py --start 2025-08-05 --end 2025-08-31 --scenario D
```

```
python scripts\analyze_range_explained.py --csv
```

```
out\auto\range_summary_20250805_20250831_D.csv
```

```
```
```

```
---
```

Notes

- ``.env`` stays local; not tracked by Git. Keeping a ``.env.bak`` copy in the root is recommended.
- ``topgappers.py`` computes gaps vs the **previous trading day** (weekends/US holidays handled).

```
---
```

Historical context

- ``v0.3.7-cleanup`` intentionally removed several legacy scripts; this release continues from the **0.3.6** line with all required runners present.
