

Ideas From Other Momentum Strategies (For Future Testing)

- **Opening Range Breakout with RVOL filter**: require $RVOL > 1.5$ in first 10–15 min and EMA(9) slope up.
- **Pivot reclaim micro-pullback**: quick pullback to EMA/VWAP then reclaim with MACD rising; very tight SL.
- **Second-candle confirmation**: use 1-second bars only at entry to avoid false breaks; minute bars remain canonical.
- **Expectancy-weighted sizing**: upsize only when multiple confirms align (gap quality, RVOL, MACD histogram growth).
- **Ticker hygiene rules**: exclude China ADRs, warrants/units/leveraged ETFs; keep price band + gap range strict.
- **Session gates**: gate=5–15 min depending on scenario strictness; no trades into halts.
