

Scripts Quick Reference — Single Day & Range (v0.3.9)

Purpose: One-page guide for the scripts we use most often — with exact command examples.

Note: No Pandoc needed. Our runners auto-load `.env` and expose `src/` (v0.3.8 envfix).

Single-Day Workflow

1) Run a day (build universe → fetch minutes → backtest)

```
python scripts\run_day_simple.py --date 2025-08-05 --scenario D
```

2) Summarize that day (all scenarios on the date)

```
python scripts\summarize_results.py --date 2025-08-05
```

3) View results (overview or detail)

Overview for the date (+ D detail if present)

```
python scripts\view_results.py --date 2025-08-05
```

Detail for a single scenario with a quick table preview

```
python scripts\view_results.py --date 2025-08-05 --scenario D --preview 20 --top 5
```

Outputs

- CSV: `out\YYYYMMDD\<SCENARIO>\results\_YYYY-MM-DD.csv`
- Summary (auto-saved by the day runner):
`out\YYYYMMDD\<SCENARIO>\summary\_YYYY-MM-DD.txt`
- Universe & minutes: `data\samples\universe\_sample.txt` and
`data\samples\sample\_<DATE>\_<SYMBOL>.csv`

Scenarios: `A`, `B`, `C`, `D`, `E` (use your baseline settings).

Range / Regression Workflow

1) Run a month (per scenario)

```
python scripts\run_range_and_summarize.py --start 2025-09-01 --end 2025-09-30 --scenario D
```

2) See what file was written (helper)

...

```
python scripts\show_latest_range.py --root out\auto --scenario D
```

...

3) Explain the range results (analyzer)

...

```
python scripts\analyze_range_explained.py --csv  
out\auto\range_summary_20250901_20250930_D.csv
```

...

Outputs

- Range CSV: `out\auto\range\_summary\_<START>\_<END>\_<SCENARIO>.csv`
- Auto-generated per-day results live under `out\auto\<YYYYMMDD>\<SCENARIO>\...` (implementation-dependent).

Repeat for `E`, `B`, `A`, `C` to complete the month.

Behind the Scenes (FYI)

- `scripts\topgappers.py` computes gaps vs the **previous trading day** using `prev\_trading\_day\_polygon.py` (weekends/US holidays handled).
- `scripts\fetch\_minutes\_polygon.py` fetches 1■minute bars for tickers in `universe\_sample.txt`.

Troubleshooting (fast)

- **Import error** (`midas\_v2`) in this terminal only:

Run once, then retry your command:

...

```
$env:PYTHONPATH="$PWD\src"
```

...

- **Empty universe / no trades:** check `.env` keys (Polygon), and re-run `run\_day\_simple.py` so it rebuilds the universe & minutes.
- **Docs refresh says Pandoc missing:** safe to ignore; we decided **not** to use Pandoc.

Handy Examples

Single day — D

...

```
python scripts\run_day_simple.py --date 2025-09-02 --scenario D  
python scripts\view_results.py --date 2025-09-02 --scenario D --preview 20 --top 5
```

...

September — D then E

...

```
python scripts\run_range_and_summarize.py --start 2025-09-01 --end 2025-09-30 --scenario D
```

```
python scripts\analyze_range_explained.py --csv  
out\auto\range_summary_20250901_20250930_D.csv
```

```
python scripts\run_range_and_summarize.py --start 2025-09-01 --end 2025-09-30 --scenario E  
python scripts\analyze_range_explained.py --csv  
out\auto\range_summary_20250901_20250930_E.csv  
``
```
