

Midas Project – Workflow Principles

****Date:**** 2025-09-07

****Version Context:**** v0.3.7-cleanup

1. Versioning Discipline

- ****Tag often, tag early.**** Each stable step gets a Git tag (e.g., v0.3.6-prev-trading-day-fix, v0.3.7-cleanup).
- Versions create **restore points** → you can always roll back if something breaks.
- Avoid large jumps without checkpoints.

2. Safe Cleanup

- We archive unused scripts instead of deleting them.
- `\_archive\_unused/YYYYMMDD/` keeps old files accessible without cluttering the repo.
- This preserves history while ensuring the active repo stays clean.

3. Scenario Modularity

- Scenarios A–E are tested separately first.
- Each scenario has a role (baseline, strict, dip-reclaim, etc.).
- ****Never hybridize too early**** — weaknesses must be visible before combining.

4. Guardrails First, Profit Later

- Prioritize ****win rate stability**** with filters: EMA/VWAP confirm, MACD rise bars, RVOL at open, universe hygiene.
- Profit boosters (multi-trade per symbol, adaptive sizing, 1-second candles) come only after stability.
- This mirrors Ross Cameron's real approach: fewer but higher-quality trades.

5. Documentation as a Safety Net

- Every major step gets an MD + PDF in `Docs/versions/`.
- This creates a **living history** of decisions, so you never lose context.
- Easy to revisit “why we did X” months later.

6. Reversibility & Transparency

- All actions (cleanup, tweaks, router, deletions) are reversible thanks to:
- Git commits + tags
- Archived files
- Backup zips of old projects
- Transparency means we always know what changed, when, and why.

7. Future Hybridization

- Only after A–E are tuned individually, we introduce a **router** with precedence (e.g., $E \rightarrow D \rightarrow B$).
- Hybridization is for *stability across regimes*, not as a quick fix.
- It will be documented and versioned as its own milestone.

Conclusion

The “cleverness” of the Midas workflow isn’t magic — it’s **discipline, modularity, and documentation**.

By tagging often, archiving safely, and documenting every step, we protect progress while steadily improving win rate and profitability.
