

Midas_V2 – Test Commands Cheat Sheet (v0.3.25)

****Last updated:**** 2025-09-21 (America/Chicago)

One-liners only. Default to Python scripts; avoid PowerShell wrappers unless noted.

Single Day

****Scenario B (baseline):****

Default (Top-50)

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario B
```

Trim to Top-12

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario B --top 12
```

Trim to Top-20

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario B --top 20
```

****Scenario D (strict):****

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario D
```

****Scenario E (dip reclaim):****

```
python scripts/run_day_simple.py --date 2025-08-05 --scenario E
```

Range (August 2025)

Baseline Scenario B

```
python scripts/run_range_and_summarize.py --start 2025-08-05 --end 2025-08-31 --scenario B
```

Strict Scenario D

```
python scripts/run_range_and_summarize.py --start 2025-08-05 --end 2025-08-31 --scenario D
```

Scenario E (dip reclaim)

```
python scripts/run_range_and_summarize.py --start 2025-08-05 --end 2025-08-31 --scenario E
```

Limitations & WR Probes

- ****Current limitation:**** The range runner does ****not**** support `--top N`. Use full universes (Top-50 de
- To test WR impact of a trimmed universe, run ****single-day**** Top-12 checks and compare.

Single-Day (Top-12 quick checks)

```
python scripts/run_day_simple.py --date 2025-08-07 --scenario B --top 12 # worst day probe
```

```
python scripts/run_day_simple.py --date 2025-08-13 --scenario B --top 12 # best day probe
python scripts/run_day_simple.py --date 2025-08-07 --scenario D --top 12
python scripts/run_day_simple.py --date 2025-08-13 --scenario D --top 12
python scripts/run_day_simple.py --date 2025-08-07 --scenario E --top 12
python scripts/run_day_simple.py --date 2025-08-13 --scenario E --top 12
```

Analyzer (Range Summaries)

Use the auto-generated CSVs in `out\auto\`.

****Scenario B:****

```
python scripts/analyze_range_explained.py --csv out\auto\range_summary_20250805_20250831_B.csv
```

****Scenario D:****

```
python scripts/analyze_range_explained.py --csv out\auto\range_summary_20250805_20250831_D.csv
```

****Scenario E:****

```
python scripts/analyze_range_explained.py --csv out\auto\range_summary_20250805_20250831_E.csv
```

Quick Paths

- Per-day CSVs: `out\YYYYMMDD\<Scenario>\results\_YYYY-MM-DD.csv`
- Per-day summary: `out\YYYYMMDD\<Scenario>\summary\_only\_YYYY-MM-DD.txt`
- Range summary CSVs: `out\auto\range\_summary\_YYYYMMDD\_YYYYMMDD\_<Scenario>.csv`

Notes

- Top behavior: Default is Top-50 gappers. Use `--top N` to override (e.g., `--top 12`, `--top 20`).
- Current gates: `riseBars=3` (on), `macd\_riseBars=0` (off).
- First compare B vs D vs E for August before changing parameters.
